

## water treatment works...

Abode Aquifier water filter products dramatically improve the taste, smell and appearance of drinking water offering a clean source of unlimited spring fresh water for you and your family to enjoy from your own kitchen.

Lose your bottle...

Atlas Aquifier combines modern contemporary styling with engineering excellence, filtered water dispensed by simply pushing the cold handle in reverse.

Gosford Aquifier takes the stunning design attributes of its sister monobloc and combines this with advanced water filtration technology allowing flow of hot, cold and filtered water from a dual handle monobloc – maintaining its modern day elegance.

Arnon provides a supply of hot, cold and filtered water from a single three-way handle. Combine this with its patented cartridge and Arnon demonstrates that style and ingenuity can harmonise beautifully together.

# minor revolution...

...of the swich will now transform your kitchen tap, new or old, into a filtered water tap delivering a constant

supply of crystal clear filtered water to your kitchen for all the family to enjoy.

For the first time, you are not restricted in the style of tap you can have in your kitchen, or the need for an unsightly separate dispenser or jug for filtered water. The addition of the Swich water filter diverter will allow you to simply and quickly convert any manufacturer's kitchen tap to supply filtered water, improving the overall taste, appearance, and quality of your drinking water without needing to compromise on style.

Swich is patent pending

The SWICH is easy to use. Simply turn the handle control to indicate the type of water supply that you wish to channel through your tap – giving you immediate access to

both the domestic water supply and then to water filtered through the Abode Aquifier filter cartridge, delivering clear refreshing results.

The flow of cold or filtered water from the tap is adjusted in exactly the same way as you would normally use the tap. When the Swich is turned to the filter setting, you

will experience a lower flow of water. This is designed to ensure that the water from the domestic supply has sufficient contact time with the activated carbon inside the filter cartridge, housed discreetly under the sink.

Filtered water flow

Normal water flow

The design of the SWICH fitting kit allows the product to be installed in the maximum number of positions on your sink and worktops. It can be fitted in the blanking plug

hole on your sink, or in a variety of positions in the vicinity of the kitchen tap or sink, allowing the designer the greatest possible flexibility in creating the work-centre scheme.

Installation is quick and simple. Abode has pioneered the use of pushfit technology for the simple DIY installation of our kitchen taps and utilise the same technology with the SWICH filter water.

Normal tap water passing over the 5-Micron high absorption activated carbon filter reduces chlorine levels and removes sediment, dirt, dissolved metals and rust resulting in a substantially improved water taste. As water passes over the

filtration system it re-polarises and when used in household appliance such as kettles are irons, can help to reduce lime-scale build-up. For full filtration facts, visit [www.aquifier.co.uk](http://www.aquifier.co.uk) or [www.swich.eu](http://www.swich.eu)

Aquifier filters are extremely simple to install and replace with an average service interval of 5600 litres (1500 gallons) or every 6 months. To change the filter, just a quick 90

degree twist releases the filter from its 'Safelock' housing and the new filter is fitted just as easily with a twist in the opposite direction – it couldn't be simpler.

## Aquifier Filter Facts

- Premium Filtration – 5-micron filter density (human hair is 50-70 microns)
- Capacity 5600 litres / 1500 gallons (average 6 months family usage)
- Specially formulated high absorption activated carbon media
- Proprietary scale inhibition system
- Simple, fast and secure SafeLock cartridge mounting system
- Replacement filter reminder service
