Style... form... function...
 The Fliq range of kitchen mixertaps offer a true revolution in design. New ceramic valve technology is aligned with uncompromising smooth operation and unique styling to create functional yet individual design classics.

The Fliq Professional mixertap offers stunning good looks and functionality together to create a practical mixertap that will inevitably become the centre piece of any kitchen.

The Fliq Diviso hides a cunning secret. A discreet flow restriction valve is incorporated into the aerator at the end of the spout. At the 'fliq' of your wrist and a 180 degree turn of the aerator you can halve your water usage and accordingly water wastage.

Fliq Professional

Fliq Diviso

Working in a similar fashion to standard ceramic disc valves the new Fliq lateral ceramic disc operates under forward and backward motion as

opposed to twist control. Simply applying forward or backward pressure on the tap paddles allows for independent control of both flow and temperature.

The classic cylindrical Fliq and the planate square Graffik mixertap offer stunning low pressure design solutions that are the perfect compliment to any contemporary kitchen, sink or worktop.
