

alternative  
installation positions

Installation is quick and simple. Abode has pioneered the use of pushfit technology for the simple DIY installation of our kitchen taps and utilise the same technology with the SWICH filter water.

The design of the SWICH fitting kit allows the product to be installed in the maximum number of positions on your sink and worktops. It can be fitted in the blanking plug hole on your sink, or in a variety of positions in the vicinity of the kitchen tap or sink, allowing the designer the greatest possible flexibility in creating the work-centre scheme.

Aquifier filters are extremely simple to install and replace, with a service interval of 5600 litres (1500 gallons) or every 6 months. To change the filter, just a quick 90 degree twist releases the filter from its 'Safelock' housing and the new filter is fitted just as easily with a twist in the opposite direction – it couldn't be simpler.

a minor revolution...

distinctly **abode**

a minor revolution...

...of the SWICH will now transform your kitchen tap, new or old, into a filtered water tap delivering a constant supply of crystal clear filtered water for all the family to enjoy.

For the first time, you are not restricted in the style of tap you can have in your kitchen, or the need for an unsightly separate dispenser or jug for filtered water. The addition of the Swich water filter diverter\* will allow you to simply and quickly convert any manufacturer's kitchen tap to supply filtered water, improving the overall taste, appearance, and quality of your drinking water without needing to compromise on style.

Half flow

Full flow

The SWICH is easy to use. Simply turn the handle control to indicate the type of water supply that you wish to channel through your tap – giving you immediate access to both the domestic water supply and then to water filtered through the Abode Aquifier filter cartridge, delivering clear refreshing results.

Normal tap water passing over the 5-Micron high absorption activated carbon filter reduces chlorine levels, sediment, dirt, dissolved metals and rust resulting in a substantially improved water taste. Water is also reconditioned as it passes over the filtration system; filtered water, when used in household appliances such as kettles and irons, can help to inhibit limescale build-up.

For full filtration facts, visit [www.aquifier.co.uk](http://www.aquifier.co.uk)

The flow of cold or filtered water from the tap is adjusted in exactly the same way as you would normally use the tap. When the Switch is turned to the filter setting, you will experience a lower flow of water. This is deliberately designed to ensure that the water from the domestic supply has sufficient contact time with the activated carbon inside the filter cartridge, housed discreetly under the sink.

# funktional design...

The SWITCH handle is available in two designs, to coordinate with all styles of kitchen taps, so that it blends into your overall sink and kitchen scheme. It is also available in a number of popular finishes to coordinate perfectly with your other kitchen appliances.
